

Stratedge Product Experience Audit

- Complete frontend, UI, UX, product experience, information architecture, onboarding, discoverability, and premium-product audit.
- Prepared from source-level review of dashboard, analytics, OCR import, trade journal, setup templates, pre-trade checklist, discipline analytics, psychology timeline, reports, shared navigation, and Indian-market variants.

Executive Scores

UX Score: 68/100

UI Score: 72/100

Product Clarity Score: 58/100

Premium Feel Score: 64/100

Mobile UX Score: 61/100

Discoverability Score: 52/100

Critical Problems

- The strongest value proposition, trader intelligence plus psychology edge, is not clear in the first 10 seconds.
- The product can look like a generic trading journal with many dashboards before it feels like an elite intelligence system.
- Premium systems are hidden. Trading DNA, Psychology Cost, Self Awareness, Pattern Detection, AI Coach, Timeline, Discipline, OCR, and Notifications are scattered across routes and cards.
- The information architecture is fragmented across analytics subroutes, top-level pages, market-specific duplicates, and dashboard cards.
- First-time onboarding is feature-led instead of outcome-led. Users need a guided loop from first trade to first insight.
- Visible encoding issues in UI copy and symbols hurt premium trust.
- Brand naming is inconsistent between Stratedge and Edgecipline, which weakens subscription confidence.

High Priority Problems

- Dashboard prioritizes generic KPIs while the differentiators appear conditionally or lower on the page.
- Analytics overview gives too many modules equal weight, increasing cognitive load.
- OCR upload has strong mechanics, but the required post-extraction review feels heavy without enough context.
- Mobile experiences become long stacked-card scrolls, making power features hard to scan.
- Empty states explain that more trades are needed but do not sufficiently preview the future value.

Medium Priority Problems

- AI Extractor, AI Reports, AI Insights, and AI Coach Feed overlap conceptually.
- Psychology Score, Self Awareness, Discipline, Trade Quality, and Would Retake need a shared mental model.
- Weekly Reports feel separate from the main intelligence system.
- Checklist and Setup Templates are valuable, but their connection to Trading DNA, Discipline, and Pattern Detection is not obvious.

- Indian-market route duplication creates risk of inconsistent UX quality.

Low Priority Problems

- The visual system leans toward generic SaaS dashboard patterns: cards, KPI tiles, small labels, and many chart panels.
- Important explanations are sometimes hidden in hover tooltips instead of embedded into the user journey.
- Ticker tape and decorative trading background create atmosphere but can distract from the core behavioral insight story.
- Some dense tool surfaces could use cleaner icon-led controls.

Features To Promote

- Psychology Cost Calculator
- Trading DNA Engine
- Self Awareness Engine
- Pattern Detection Engine
- AI Coach Feed
- Pre-Trade Checklist tied to setup rules
- Weekly AI Reports
- Psychology Timeline

Features To Reorganize

- Move all intelligence systems into one top-level Intelligence or Coach area.
- Use primary navigation: Dashboard, Journal, Import, Plan, Intelligence, Reports, Settings.
- Place Trading DNA, Psychology Cost, Pattern Detection, Self Awareness, Discipline, Timeline, and AI Coach under Intelligence.
- Place Setups and Pre-Trade Checklist under Plan.
- Place OCR upload and manual add under Import.

Features To Explain Better

- Trading DNA: your repeatable edge fingerprint.
- Psychology Cost: money lost to behavior, not strategy.
- Self Awareness: how accurately you judge trade quality.
- Pattern Detection: repeated strengths and risk patterns with sample-size confidence.
- AI Coach Feed: what changed, why it matters, and the next action.
- Psychology Timeline: why your mindset score changes over time.

Features To Hide Or De-emphasize

- Do not remove features. Hide advanced analytics until enough data exists or place them behind Advanced breakdown.
- Hide low-confidence charts when sample size is too small and show unlock previews instead.
- Reduce duplicate AI labels in top-level navigation.

Features To Merge

- Merge AI Insights and AI Coach Feed into one coaching stream.
- Merge Discipline Analytics signals with Checklist outcomes.

- Merge Psychology Timeline with Psychology Analytics as a longitudinal tab.
- Merge top-level trading-dna route with analytics/trading-dna to avoid duplicate mental models.
- Merge market-specific IA where possible and use market context instead of duplicate navigation.

Redesign Strategy

- Make the product promise: Stratedge shows what makes you profitable, what leaks money, and what to do before your next trade.
- Primary navigation should be: Dashboard, Journal, Import, Plan, Intelligence, Reports.
- Dashboard should become a command center with today's next action, current edge, biggest leak, discipline status, latest AI coach insight, Log Trade, and Run Checklist.
- Intelligence should become the premium heart of the app with tabs for Trading DNA, Psychology Cost, Patterns, Self Awareness, Discipline, Timeline, and AI Coach.
- Each intelligence tab should answer four questions: what happened, why it matters, what to do next, and what improves if the user follows through.
- Onboarding should be milestone-based: create setup rules, log or upload first trade, add psychology tags, review first insight, run first checklist, generate first weekly report, unlock Trading DNA.
- Preserve all premium systems, but present them as one intelligence loop: Plan, Execute, Journal, Analyze, Coach, Improve.
