

Product Requirements Document

AI-powered trading journal and discipline coach

Prepared from the Edgecipline codebase

Last updated: 2026-09-18

Edgecipline Product Requirements Document

Last updated: 2026-09-18

1. Product Summary

Edgecipline is an AI-powered trading journal and discipline coach for retail traders, starting with Forex and Indian market traders. The product lets users upload screenshots from their broker, automatically extracts trade details using OCR and AI, saves those trades into a journal, and turns the journal into actionable analytics about performance, psychology, setup quality, discipline, and repeated mistakes.

The core product promise is:

"Upload your trade screenshot. Edgecipline builds your journal, finds your patterns, and helps you become a more disciplined trader."

The app is not just a record-keeping tool. It is designed to help traders understand why they win, why they lose, when they break rules, which setups are actually working, and what they should focus on next.

2. Problem Statement

Retail traders often know they should journal, but most do not do it consistently because manual journaling is slow, repetitive, and emotionally uncomfortable after losses. Even when traders do journal, their records are usually incomplete and do not connect execution behavior, psychology, setup rules, and P&L outcomes.

As a result, traders struggle to answer important questions:

- Which market, session, setup, or instrument actually makes me money?
- Am I following my trading plan or trading emotionally?
- How much money do FOMO, revenge trading, overconfidence, or broken rules cost me?
- Which mistakes repeat most often?
- What should I improve next week?

Edgecipline reduces the friction of journaling by extracting trade data from screenshots, then converts that data into practical coaching insights.

3. Target Users

Primary Users

Retail Forex traders who use platforms such as MT4, MT5, cTrader, or broker history screenshots and want to improve consistency without manually entering every trade.
Indian retail traders, especially NSE/BSE options and F&O traders using brokers such as Zerodha, Upstox, Angel One, Dhan, Groww, Fyers, 5paisa, ICICI Direct, Kotak Securities, and Paytm Money.

Secondary Users

Early-stage serious traders who are not yet profitable but are willing to review their behavior.

Small trading communities, mentors, or educators who want their students to build journaling discipline.

Trading coaches who may eventually use aggregated journal data to review student performance.

Excluded Users For Version 1

Institutional trading desks.

High-frequency or fully automated traders.

Users who need direct broker sync as the only acceptable journaling method.

Users seeking trade signals, copy trading, or financial advice.

4. User Personas

Persona 1: The Inconsistent Retail Trader

This user takes trades frequently but does not maintain a reliable journal. They often remember big wins and losses emotionally, but cannot identify patterns objectively. They want quick answers and dislike manual admin work.

Needs:

- Fast trade logging.
- Clear P&L and win-rate views.
- Simple feedback on repeated mistakes.
- Low-friction mobile experience.

Persona 2: The Discipline-Focused Trader

This user already has a strategy and rules, but struggles to follow them consistently. They care about process quality, not just outcome.

Needs:

- Setup checklists.
- Plan adherence analytics.
- Psychology and emotional tags.
- Weekly review and discipline trend.

Persona 3: The Indian Options Trader

This user trades NIFTY, BANKNIFTY, CE/PE options, or intraday stocks and needs a product that understands Indian market terminology, brokers, rupee P&L, lot sizes, expiry, strike price, and option type.

Needs:

- Indian market mode.
- Broker-aware screenshot extraction.
- Option-specific fields.
- Indian analytics separate from Forex data.

Persona 4: The Mobile-First Trader

This user trades and reviews mostly from a phone. They want screenshot upload, journal review, and quick insights without desktop complexity.

Needs:

- PWA / Android app support.
- Fast mobile navigation.
- Upload from phone gallery.
- Push notifications and reminders.

5. Value Proposition

Edgecipline saves traders time by turning screenshots into structured trade entries, then uses the journal data to reveal behavioral and strategic patterns.

Core value drivers:

- Less manual journaling.
- Better trading self-awareness.
- Clearer discipline feedback.
- Market-specific support for Forex and Indian traders.
- AI-assisted extraction and coaching.
- Weekly review loop that encourages improvement.

6. Product Goals

Business Goals

- Acquire early retail traders in India and Forex communities.
- Convert free users into paid subscribers after they experience screenshot extraction value.
- Build a defensible data layer around trade behavior, psychology, setups, and outcomes.
- Establish Edgecipline as a discipline-first trading journal, not another signal app.

User Goals

- Log trades quickly.
- Understand what is working and what is not.
- Follow trading rules more consistently.
- Reduce emotional and impulsive trades.
- Review each week with specific improvement actions.

Product Principles

- Reduce journaling friction first.
- Show insights only when enough data exists.
- Separate Forex and Indian market data cleanly.
- Coach discipline without pretending to predict the market.
- Make every insight actionable.

7. Core Features

This section lists every feature in Edgecipline in simple language. Each table tells you what the feature does and whether it is available on the Web app, the Mobile app, or both.

How to read the tables:

- Web = the browser app (desktop or mobile browser).
- Mobile = the Android app from Google Play (built with Capacitor). An iOS build is prepared but not published yet.
- Yes = available. No = not available on that platform. Native = works using the phone's own system features.

7.1 Where The App Runs

Web app

Notes: Full feature set. Payments through Razorpay.

Status: Live

Android app

Notes: Same features as web plus phone-only extras (push notifications, native checklist reminders, Google Play billing).

Status: Live on Google Play

iOS app

Status: Prepared, not published

Notes: Capacitor iOS project exists. Not in the App Store yet.

7.2 Account And Onboarding

Register with email

What it does: Create an account with email and password.

Web: Yes Mobile: Yes

Verify OTP

What it does: A one-time code is sent to your email to confirm it is really you.

Web: Yes Mobile: Yes

Login

What it does: Sign in with your email and password.

Web: Yes Mobile: Yes

Google login

What it does: Sign in with one tap using your Google account.

Web: Yes Mobile: Yes

Forgot / reset password

What it does: Get a reset link by email and set a new password.

Web: Yes Mobile: Yes

Accept terms

What it does: You must accept Terms and Privacy Policy before using the app.

Web: Yes Mobile: Yes

Onboarding questions

What it does: Short questions about your trading style, market, and goals. Used to

personalise coaching.

Web: Yes Mobile: Yes

Profile page

What it does: See your name, email, plan, subscription expiry, and trade limits.

Web: Yes Mobile: Yes

Settings page

What it does: Change preferences such as notifications and market mode.

Web: Yes Mobile: Yes

Delete account

What it does: Permanently remove your account and all your data from inside the app.

Web: Yes Mobile: Yes

Secure session

What it does: Your login stays safe using secure tokens. On the phone, tokens are stored in encrypted device storage.

Web: Yes Mobile: Yes (Native)

Terms and Privacy pages

What it does: Public pages you can read anytime.

Web: Yes Mobile: Yes

7.3 Market Modes

Forex mode

What it does: Journal, analytics, setups, and dashboard for Forex trading.

Web: Yes Mobile: Yes

Indian Market mode

What it does: Journal, analytics, setups, and dashboard for Indian stocks and options.

Web: Yes Mobile: Yes

Market switch

What it does: One toggle to move between Forex and Indian mode. Each market keeps its own data.

Web: Yes Mobile: Yes

Indian-specific fields

What it does: Strike price, option type (CE/PE), expiry date, broker, quantity, and lot details.

Web: Yes Mobile: Yes

Currency and labels

What it does: Money, symbols, and field names change to match the market you are in.

Web: Yes Mobile: Yes

7.4 Logging A Trade

Upload screenshot

What it does: Upload a broker screenshot and the app reads the trade details for you using OCR and AI.

Web: Yes Mobile: Yes

Confirm before extraction

What it does: You see the picture first and confirm it is a trade screenshot.

Web: Yes Mobile: Yes

Choose broker

What it does: For Indian market, pick your broker so the AI reads the screenshot correctly.

Web: Yes Mobile: Yes

Processing status

What it does: Clear states: uploading, queued, processing, completed, failed.

Web: Yes Mobile: Yes

Reject non-trade images

What it does: If the picture is not a trade, the app tells you and does not save junk.

Web: Yes Mobile: Yes

Multi-trade extraction

What it does: One screenshot with several trades creates several journal entries.

Web: Yes Mobile: Yes

Review before save

What it does: Check and correct the extracted data before it goes into your journal.

Web: Yes Mobile: Yes

Confidence score

What it does: The app shows how sure it is about the extracted data.

Web: Yes Mobile: Yes

Manual add trade

What it does: Type a trade in yourself when there is no screenshot.

Web: Yes Mobile: Yes

Trade fields

What it does: Pair or instrument, buy/sell, size, entry, exit, stop loss, take profit, P&L, date, session, strategy, notes, risk:reward.

Web: Yes Mobile: Yes

Psychology fields

What it does: Entry basis (plan, emotion, impulsive), mood, confidence, emotion tags, mistake tag, lesson, would-retake.

Web: Yes Mobile: Yes

Setup checklist in form

What it does: Pick a saved setup and tick which rules you followed. The app computes a setup score.

Web: Yes Mobile: Yes

Free trade limit

What it does: Free users can log 2 trades per market. After that the app asks you to subscribe.

Web: Yes Mobile: Yes

7.5 Trade Journal

Trade list

What it does: See all your trades in a list, newest first.

Web: Yes Mobile: Yes

Filters and search

What it does: Filter by date, pair, result, strategy, session, and more.

Web: Yes Mobile: Yes

Trade detail page

What it does: Open one trade and see every field, the screenshot, psychology, and checklist.

Web: Yes Mobile: Yes

Edit trade

What it does: Fix any mistake after saving.

Web: Yes Mobile: Yes

Delete trade

What it does: Remove a trade. Analytics update right away.

Web: Yes Mobile: Yes

Trade status badge

What it does: Shows if the trade is still processing, completed, or needs review.

Web: Yes Mobile: Yes

Separate journals

What it does: Forex and Indian trades are kept in separate lists.

Web: Yes Mobile: Yes

7.6 Setups And Checklists

Create setups

What it does: Save your trading strategies (up to 50 per market) with a name.

Web: Yes Mobile: Yes

Setup rules

What it does: Add up to 20 rules to each setup. This becomes your pre-trade checklist.

Web: Yes Mobile: Yes

Reference images

What it does: Attach example chart images to each setup.

Web: Yes Mobile: Yes

Setup score

What it does: For every trade, the app shows what percent of rules you followed.

Web: Yes Mobile: Yes

Checklist page

What it does: A daily pre-trade checklist you tick before the market opens.

Web: Yes Mobile: Yes

Psychology checklist

What it does: Quick mindset check (calm, focused, tired, etc.) before trading.

Web: Yes Mobile: Yes

Checklist reminder

What it does: Get a reminder at your chosen time to complete the checklist.

Web: Yes Mobile: Yes (Native alarm)

Checklist history

What it does: The app stores every checklist you complete so you can see your habit over time.

Web: Yes Mobile: Yes

Safe history

What it does: Editing or deleting a setup never changes old trades. Each trade keeps a copy of the rules it was scored on.

Web: Yes Mobile: Yes

7.7 Dashboard

Key numbers

What it does: Total trades, win rate, net P&L, and current streak at a glance.

Web: Yes Mobile: Yes

Equity curve

What it does: A chart of how your account has grown or dropped over time.

Web: Yes Mobile: Yes

Today's intelligence

What it does: A short summary of what your data says today.

Web: Yes Mobile: Yes

AI coach snapshot

What it does: The latest coaching message based on your real trades.

Web: Yes Mobile: Yes

Quick actions

What it does: One-tap buttons: log trade, upload screenshot, run checklist, open report.

Web: Yes Mobile: Yes

Welcome guide

What it does: Step-by-step guide for new users on their first visit.

Web: Yes Mobile: Yes

Rescue banner

What it does: If your plan is expiring or expired, a friendly banner shows how to continue.

Web: Yes Mobile: Yes

Indian dashboard

What it does: A separate dashboard for Indian market mode.

Web: Yes Mobile: Yes

7.8 Analytics

Analytics overview

What it does: Summary of wins, losses, profit, average trade, and more.

Web: Yes Mobile: Yes

Weekly P&L

What it does: Profit and loss week by week.

Web: Yes Mobile: Yes

Best and worst pairs

What it does: Which instruments make or lose you money.

Web: Yes Mobile: Yes

Strategy league

What it does: Ranks your strategies by trades, win rate, and profit.

Web: Yes Mobile: Yes

Session and time analysis

What it does: Which sessions and hours you trade best.

Web: Yes Mobile: Yes

Risk:reward breakdown

What it does: How your risk:reward choices affect results.

Web: Yes Mobile: Yes

Calendar P&L

What it does: A calendar showing green and red days.

Web: Yes Mobile: Yes

Drawdown view

What it does: How deep your losing periods went.

Web: Yes Mobile: Yes

Indian analytics

What it does: The same analytics built for Indian stocks and options.

Web: Yes Mobile: Yes

Fast loading

What it does: Analytics are cached so pages open quickly.

Web: Yes Mobile: Yes

7.9 Psychology And Discipline

Psychology analytics

What it does: How mood, confidence, and emotions affect your results.

Web: Yes Mobile: Yes

Psychology cost

What it does: Shows how much money FOMO, revenge, fear, and greed have cost you.

Web: Yes Mobile: Yes

Self-awareness score

What it does: Measures how honestly and completely you record your psychology.

Web: Yes Mobile: Yes

Repeated mistakes

What it does: Lists the mistakes you make most often and what they cost.

Web: Yes Mobile: Yes

Pattern detection

What it does: Finds patterns such as losing after a win, overtrading, or tilt.

Web: Yes Mobile: Yes

Discipline page

What it does: Your daily discipline entries and discipline score.

Web: Yes Mobile: Yes

Discipline analytics

What it does: Trend of your discipline over weeks.

Web: Yes Mobile: Yes

Revenge and tilt detection

What it does: Warns when your trades look like revenge trading.

Web: Yes Mobile: Yes

Psychology timeline

What it does: A day-by-day story of your mindset and results.

Web: Yes Mobile: Yes

Streaks page

What it does: Journal streaks, discipline streaks, and best streaks.

Web: Yes Mobile: Yes

7.10 Intelligence Hub And AI Coaching

Intelligence hub

What it does: One place with five questions: What makes me money? What costs me money?

What should I improve? What should I do now? How am I evolving?

Web: Yes Mobile: Yes

Trading DNA

What it does: Your trading identity: strengths, weaknesses, best setup, best session, risk style.

Web: Yes Mobile: Yes

Share Trading DNA

What it does: Create a shareable card of your Trading DNA.

Web: Yes Mobile: Yes

AI insights

What it does: Plain-English insights generated from your journal.

Web: Yes Mobile: Yes

AI coach chat

What it does: Ask the coach questions about your trading. It answers using your real data.

Web: Yes Mobile: Yes

AI coach feed

What it does: A running feed of coaching cues and next actions.

Web: Yes Mobile: Yes

Rule follow-through

What it does: Tracks whether you act on the coach's advice.

Web: Yes Mobile: Yes

Mindset evolution

What it does: Shows how your mindset scores change across review cycles.

Web: Yes Mobile: Yes

Locked states

What it does: When there is not enough data, the app says so instead of guessing.

Web: Yes Mobile: Yes

Indian intelligence modules

What it does: Six modules for Indian mode: Trading DNA, Patterns, Risk Patterns, Psychology Cost, Self-Awareness, AI Coach.

Web: Yes Mobile: Yes

7.11 Missions

Missions page

What it does: Pick goals to work on. The app tracks progress automatically from your trades.

Web: Yes Mobile: Yes

Risk missions

What it does: 1% Risk Discipline, Stop Loss on Every Trade, Protect Your Daily Limit, Risk:Reward Discipline.

Web: Yes Mobile: Yes

Psychology missions

What it does: No Revenge Trades (14 and 30 days), No FOMO Trades, Calm Mindset, High Confidence Only, Psychology Complete.

Web: Yes Mobile: Yes

Plan missions

What it does: Checklist Every Trade, Rule Adherence Streak, Follow Your Plan, A+ Setups

Only, Avoid Low-Confidence Setups, Plan-Consistent Month.

Web: Yes Mobile: Yes

Journal missions

What it does: 14-Day and 30-Day Journal Streak, Daily Reflection Streak, Lesson in Every Loss, 4 Weekly Reviews.

Web: Yes Mobile: Yes

Mission progress

What it does: A progress bar and status for each active mission.

Web: Yes Mobile: Yes

AI mission suggestions

What it does: The app recommends which mission fits your current weakness.

Web: Yes Mobile: Yes

7.12 Reflection And Reviews

Daily reflection

What it does: Write a short end-of-day note. The app keeps a streak.

Web: Yes Mobile: Yes

Weekly reports

What it does: A report every week with performance, discipline, and what to improve.

Web: Yes Mobile: Yes

Weekly report email

What it does: The weekly report is also sent to your email.

Web: Yes Mobile: Yes

Report history

What it does: All past weekly reports are stored in the app.

Web: Yes Mobile: Yes

Morning mentor

What it does: A short morning message to set your focus for the day.

Web: Yes Mobile: Yes

7.13 Notifications

Notifications page

What it does: In-app inbox of all messages the app sent you.

Web: Yes Mobile: Yes

Push notifications

What it does: Alerts on your phone even when the app is closed.

Web: No Mobile: Yes (Native)

Smart notifications

What it does: Sent only when useful, for example after a losing streak or a missed journal day.

Web: Yes Mobile: Yes

Quiet hours

What it does: No notifications during the hours you choose.

Web: Yes Mobile: Yes

Checklist reminders

What it does: Reminder at your chosen time. On Android this works even after phone restart.

Web: Yes Mobile: Yes (Native)

Notification preferences

What it does: Turn each type of notification on or off.

Web: Yes Mobile: Yes

7.14 Subscription And Payments

Free plan

What it does: 2 trades per market for free, with full analytics on those trades.

Web: Yes Mobile: Yes

Paid plans

What it does: 1 month INR 349, 3 months INR 899, 6 months INR 1499. Unlimited trades and all features.

Web: Yes Mobile: Yes

Razorpay checkout

What it does: Pay by UPI, card, or net banking on the web.

Web: Yes Mobile: No

Google Play billing

What it does: Pay through Google Play inside the Android app (store rules require this).

Web: No Mobile: Yes (Native)

Plan status

What it does: Your plan and expiry date are shown on the profile page.

Web: Yes Mobile: Yes

Expiry handling

What it does: When the plan ends, you keep your data but return to the free limit.

Web: Yes Mobile: Yes

Subscription rescue

What it does: Friendly reminders before and after expiry with an easy way to continue.

Web: Yes Mobile: Yes

Promotions and referral links

What it does: Short links (edgecipline.com/r/...) that track where users came from and apply offers.

Web: Yes Mobile: Yes

Manual activation

What it does: Admin can activate a plan by hand if a payment needs help.

Web: Yes Mobile: Yes

7.15 Support And Feedback

Support center

What it does: Help page with contact options and articles.

Web: Yes Mobile: Yes

Help articles

What it does: Guides that answer common questions.

Web: Yes Mobile: Yes

Support tickets

What it does: Create a ticket, see replies, and track its status.

Web: Yes Mobile: Yes

AI support assistant

What it does: Instant answers from a helper trained on the help articles.

Web: Yes Mobile: Yes

WhatsApp contact

What it does: Tap to chat with the team on WhatsApp.

Web: Yes Mobile: Yes

Report an issue

What it does: Report a bug with screenshots and see the status of your report.

Web: Yes Mobile: Yes

Feedback

What it does: Send suggestions or ratings from inside the app.

Web: Yes Mobile: Yes

7.16 Admin Console (Internal, Web Only)

Admin login

What it does: Separate secure login for the team.

Web: Yes Mobile: No

Admin dashboard

What it does: Users, trades, revenue, and platform health at a glance.

Web: Yes Mobile: No

User management

What it does: Search users, see their plan, activate or extend subscriptions.

Web: Yes Mobile: No

Expired users

What it does: List of users whose plan has ended, for follow-up.

Web: Yes Mobile: No

Trade review

What it does: Look at any user's trades to help with support.

Web: Yes Mobile: No

Payments

What it does: All Razorpay and Google Play payments with status.

Web: Yes Mobile: No

Promotions

What it does: Create and manage promo codes and referral campaigns.

Web: Yes Mobile: No

Feedback review

What it does: Read and manage user feedback.

Web: Yes Mobile: No

Issue reports

What it does: Review bug reports and update their status.

Web: Yes Mobile: No

Support tickets and articles

What it does: Reply to tickets and write help articles.

Web: Yes Mobile: No

Notification management

What it does: Send and analyse notifications.

Web: Yes Mobile: No

Mission management

What it does: Add or edit mission templates.

Web: Yes Mobile: No

Monitoring

What it does: Cache health, notification analytics, and system metrics.

Web: Yes Mobile: No

7.17 Nice-To-Have For Version 1 Or Shortly After

iOS App Store release

What it would do: Publish the prepared iOS build.

More broker templates

What it would do: Better extraction for more brokers.

Export to CSV or PDF

What it would do: Download your journal.

Calendar-based weekly review builder

What it would do: Build reviews from the calendar view.

Plan comparison screen

What it would do: Side-by-side plan features before paying.

AI next-week checklist

What it would do: The coach writes your checklist for next week.

Cohort benchmarks

What it would do: Compare yourself with similar traders.

Trading plan document builder

What it would do: Write and store your full trading plan.

Community or mentor dashboards

What it would do: Let a mentor view a student's journal.

More advanced setup image references

What it would do: Annotate and compare setup images.

8. User Flow From Start To Finish

New User Flow

1. User opens the app.
2. App checks for a valid session.
3. If unauthenticated, user is sent to login.
4. User registers with email/password or signs in with Google.
5. User accepts terms.
6. User lands on dashboard.
7. User sees onboarding guide and quick actions.
8. User chooses market mode: Forex or Indian Market.
9. User uploads first trade screenshot or logs a trade manually.
10. App extracts trade fields or opens manual entry form.
11. User reviews trade details.
12. User adds psychology, notes, setup, and checklist data.
13. User saves trade to journal.
14. Dashboard and analytics refresh.
15. User reviews performance, mistakes, and AI coach snapshot.
16. User returns over time to log more trades.
17. Once enough trades exist, deeper insights unlock.
18. User reviews weekly report and acts on next improvement focus.

Screenshot Upload Flow

1. User selects Upload Screenshot.
2. User selects market mode.
3. If Indian market, user selects broker and trade subtype where required.
4. User uploads image.
5. App shows confirmation preview.
6. User confirms extraction.
7. Backend uploads image to storage and creates pending trade/job.
8. OCR/AI pipeline extracts structured trade data.
9. Client shows progress state.
10. Extraction completes.
11. User reviews one or more extracted trades.
12. User edits incorrect fields.
13. User adds psychology/checklist metadata.
14. User saves trade or saves all extracted trades.
15. Trade appears in journal.

Manual Trade Flow

1. User selects Log Trade.
2. User enters core trade details.
3. User optionally selects setup strategy.
4. User completes checklist.
5. User adds psychology, mistake, lesson, and notes.

6. User saves trade.
7. Dashboard and analytics update.

Analytics Flow

1. User opens dashboard or analytics.
2. If trade count is low, user sees unlock states explaining what data is needed.
3. If enough data exists, user sees performance metrics, patterns, psychology cost, discipline trends, and AI coach insights.
4. User drills into specific sections such as psychology, trading DNA, repeated mistakes, patterns, or AI coach.
5. User leaves with one practical improvement target.

Subscription Flow

1. User uses free screenshot upload allowance.
2. User attempts additional premium upload.
3. App displays subscription-required message.
4. User selects plan.
5. Razorpay checkout opens.
6. Payment is verified by backend.
7. User subscription becomes active.
8. Screenshot uploads continue.

9. MVP Definition

The MVP should prove that traders will consistently log trades when screenshot extraction removes friction, and that analytics/discipline insights are valuable enough to drive retention and paid conversion.

MVP Must Include

- Auth and terms acceptance.
- Forex and Indian market modes.
- Screenshot upload with AI/OCR extraction.
- Manual trade entry.
- Trade journal CRUD.
- Dashboard with core KPIs.
- Basic analytics: trade count, win rate, net P&L, equity curve, weekly P&L, pair/instrument performance, strategy performance.
- Setup checklist attached to trades.
- Psychology fields attached to trades.
- Discipline and mistake analytics.
- Basic AI coach or rules-based insight feed.
- Weekly report view.
- Subscription gating for screenshot uploads.
- Admin console for early support.
- Mobile-friendly PWA/Android wrapper.

MVP Can Be Rough But Functional

- AI insight copy does not need to be perfect.
- Charts can be simple.
- Broker extraction coverage can start with the most common brokers.
- Weekly emails can be enabled after in-app report generation works.
- Admin console can be utilitarian.

MVP Launch Criteria

- A user can register, upload a valid screenshot, save a trade, and see analytics update.
- Indian and Forex data remain separated.
- Invalid screenshots fail gracefully.
- Manual trade entry works as a fallback.
- Payment verification activates subscription.
- Admin can resolve user subscription issues.
- No critical security issue allows users to access another user's trades.

10. Success Metrics

Activation Metrics

- Account creation to first saved trade conversion.
- Percentage of new users who upload a screenshot within first session.
- Screenshot extraction completion rate.
- Percentage of extracted trades saved after review.
- Time from signup to first saved trade.

Target:

- 60%+ of registered users save at least one trade.
- 40%+ of new users try screenshot upload.
- 80%+ of valid uploads complete successfully.

Engagement Metrics

- Trades logged per active user per week.
- Weekly active users.
- Percentage of users returning to dashboard after first trade.
- Percentage of users viewing analytics after logging trades.
- Checklist completion rate.
- Psychology field completion rate.
- Weekly report views.

Target:

- Users who log 5+ trades are materially more likely to return the next week.
- 50%+ of active users view analytics at least once per week.

Retention Metrics

- D1, D7, D30 retention.
- Weekly returning users.
- Cohort retention by first successful screenshot upload.
- Cohort retention by first analytics insight viewed.

Target:

- Successful screenshot upload should correlate with higher D7 retention.
- Users with 10+ saved trades should show strong weekly retention.

Monetization Metrics

- Free-to-paid conversion.
- Subscription checkout start rate.
- Payment success rate.
- Monthly recurring revenue.
- Churn rate.
- Upload limit conversion rate.

Target:

- Free users who hit upload limit should convert at a meaningfully higher rate than users who do not.

Quality Metrics

- Extraction accuracy by broker and market type.
- Manual correction rate after extraction.
- Failed upload rate.
- Non-trade rejection accuracy.
- Average processing time.
- Support tickets per 100 uploads.

Target:

- Keep median extraction time low enough that users do not abandon the upload flow.
- Track broker-specific extraction issues to prioritize fixes.

11. What We Are Deliberately Not Building In Version 1

Version 1 should not attempt to become a full trading platform.

Not building:

- Live trading execution.
- Broker account linking or automatic trade sync.
- Buy/sell signals.
- Copy trading.
- Social feed or public trader profiles.
- Community chat.
- Portfolio management across asset classes.
- Tax filing.
- Advanced options strategy payoff modeling.
- Real-time market data terminal.
- Backtesting engine.
- Strategy marketplace.
- Funded account challenge management.
- Institutional risk desk features.
- Complex team permissions.
- White-label broker partnerships.
- Guaranteed financial advice or profit predictions.

The version one product should stay focused on journaling, extraction, behavioral analytics, and discipline coaching.

12. Key Assumptions

- Traders want to journal but avoid doing it because manual entry is too painful.
- Screenshot upload is a strong enough wedge to drive first-use activation.
- Traders will correct extracted fields if the app gets most fields right.
- Psychology and discipline insights are a stronger differentiator than generic P&L charts.
- Indian traders are underserved by generic trading journals.
- A limited free upload model can drive paid conversion.
- Mobile upload is important because many retail traders operate from phones.

13. Risks And Mitigations

Risk: AI Extraction Accuracy Is Inconsistent

Mitigation:

- Store extraction confidence.
- Mark low-confidence trades as needs review.
- Allow easy user correction.
- Track broker-specific accuracy.
- Keep manual entry as fallback.

Risk: Users Do Not Enter Psychology Data

Mitigation:

- Make psychology fields lightweight.
- Use chips, defaults, and optional fields.
- Show clear analytics unlocked by psychology data.
- Do not block trade saving.

Risk: Analytics Feel Generic

Mitigation:

- Use unlock states until enough data exists.
- Tie insights to specific user data.
- Prioritize "what to do next" over long explanations.

Risk: Traders Expect Signals

Mitigation:

- Position product clearly as a journal and discipline coach.
- Avoid language implying prediction, guaranteed profits, or financial advice.

Risk: Indian And Forex Complexity Slows Product

Mitigation:

- Keep separate models and routes.
- Prioritize top brokers and common screenshot formats.
- Avoid overgeneralizing market logic too early.

Risk: Paid Conversion Is Weak

Mitigation:

- Make free value immediate.
- Gate the high-value extraction workflow, not basic manual journaling.
- Show users what insights unlock as they add data.

14. Recommended V1 Roadmap

Phase 1: Reliable Journal Core

- Auth.
- Manual trade entry.
- Screenshot upload.
- Trade journal CRUD.
- Dashboard KPIs.
- Forex and Indian separation.

Phase 2: Discipline Layer

- Setup strategies.
- Trade checklist.
- Psychology fields.
- Mistake tagging.
- Discipline analytics.

Phase 3: Coaching And Review

- Trading DNA.
- Pattern detection.
- AI coach feed.
- Weekly reports.
- Self-awareness and psychology cost.

Phase 4: Monetization And Operations

- Subscription gating.
- Razorpay flow.
- Admin console.
- Feedback tooling.
- Notification preferences.

Phase 5: Mobile Polish

- PWA install flow.
- Android APK.
- Push reminders.
- Mobile bottom navigation.
- Faster upload/review loop.

15. Open Product Questions

- Which market should be positioned first publicly: Indian options, Forex, or both?
- What is the exact free plan limit: one lifetime upload, one monthly upload, or limited number of trades?
- Should manual journaling remain free forever?
- Which brokers should be considered launch-critical?
- What extraction accuracy threshold is acceptable for beta launch?
- Should weekly reports be generated automatically or manually triggered in MVP?
- Should the AI coach be marketed as AI-powered from day one, or should the product lead with "discipline analytics"?
- What compliance disclaimer should appear around analytics and coaching?

16. Positioning Recommendation

For an early-stage startup, the strongest wedge is:

"The trading journal that fills itself from your broker screenshots."

The broader product vision is:

"A discipline operating system for retail traders."

Recommended MVP positioning:

- Lead with screenshot-to-journal automation.
- Differentiate with Indian market support and psychology analytics.
- Avoid sounding like a signal provider.
- Use discipline, review, and repeatability as the emotional promise.
