

Edgecipline: Marketing Plan

India-first, Android on Google Play. Pricing: Rs 350 per month, Rs 899 for 3 months, Rs 1499 for 6 months. Free users get one screenshot upload. Suggestions only, not data on what works for you.

1. Positioning

One message: Stop repeating the same trading mistakes. Upload a screenshot and see your pattern.

- Do not pitch it as another trading journal. Pitch discipline and psychology, with AI reading the screenshot so there is no typing.
- Target traders who already lose money, mainly Indian options (NIFTY, BANKNIFTY). They know they have a discipline problem and will pay to fix it. Forex is the second audience.

2. Before you spend anything

- **Play Store listing.** Good screenshots, a short demo video, and keywords such as trading journal, options journal, NIFTY journal. Most early installs come from here.
- **Free tier.** One upload may be too tight to show value. Test two or three. This matters more than any ad.
- **Tracking.** Install, first upload, week-1 return, paid. Use the existing attribution and campaign setup so you know which channel pays back.
- **Review habit.** Ask for a Play review after a good moment (first insight, win streak). A 4.5+ rating lifts every other channel.

3. Channels

Months 0-3: low cost, learn what works

- **Trading influencers (YouTube, Instagram).** Probably the best channel. Give each creator a unique coupon code and link so you see who converts. Use small and mid creators (10k-100k followers) in options or discipline. Pay a flat fee plus commission per paid user.
- **Short videos (Reels, Shorts).** Post your own 15-30 second clips: upload a losing day and show what the app found. Real screenshots beat polished ads.
- **Communities.** Telegram groups, Reddit (r/IndiaInvestments, r/IndianStreetBets), X trading accounts. Be useful, share findings, not links. Check each community's rules first.
- **Founder-led outreach.** Give 50-100 active traders a free premium month for feedback and a testimonial.

Months 3-6: scale what works

- **Referral programme.** Free month for both sides, using the coupon system.
- **Paid ads (Play, Meta).** Start only when the funnel shows week-1 return and an affordable payback. Small daily budget; watch cost per paid user, not cost per install.
- **Content and SEO.** Pages like how to journal option trades, and revenge trading: how to stop. The site already has a sitemap.
- **Shareable weekly report.** A trimmed report card (P&L hidden if the user prefers). Each share is a free ad.
- **Partnerships.** Trading courses, mentors, prop-firm communities. Offer a group discount.

4. Message ideas

- Your losses have a pattern. Find it in 10 seconds.
- No typing. Screenshot in, journal out.
- See what revenge trading costs you each month.
- Discipline score, not just P&L.

5. Weekly numbers to track

Metric	Why
Installs by channel	Where users come from
First upload within 24 hours	Whether onboarding works
Week-1 and week-4 return	The real retention signal
Free to paid conversion	Pricing and free-tier test
Cost per paid user by channel	Which channel to scale or cut
Play rating and review count	Store ranking and trust

6. Rules and risks

- **Do not promise profits.** Say it improves discipline and awareness. SEBI is strict on trading advice and returns claims, and Play can reject misleading ads.
- **Do not advertise in-app coupon codes on Android** until Play offers are built.
- Google holds earnings until BillDesk KYC is done, which affects cash flow.

7. First 90 days

When	What
Weeks 1-2	Fix the store listing, set up tracking, adjust the free tier.
Weeks 3-6	Sign 5-10 small creators with unique codes. Post 3 short videos a week. Run the free-premium beta with 50 traders.
Weeks 7-12	Double down on the 2 channels with the best cost per paid user. Launch referrals. Start small paid ads only if the numbers support it.
